DG. ICMR OFFICE
Diary No 13708/5
Date 17/08/2026

Head P&C
RB

Respected Dr. Bahl,

My name is Anshul, a Class 12 student at Kensri School and College in Bangalore, Karnataka. Having lived with Crohn's disease since age 8, I have dedicated my independent research to developing applied machine learning models to solve the unpredictability of IBD symptom flare-ups.

What the Research Does:
Standard clinical tracking relies on symptom reporting after a flare-up has already begun. My project designs a wearable-integrated framework that continuously monitors physiological signals (such as heart rate variability, temperature shifts, and stress markers). It applies a hybrid Machine Learning architecture—combining Huber Regressions and LSTM (Long Short-Term Memory) networks—to detect non-linear physiological anomalies up to days before physical symptoms appear. The model was built and validated using 50+ synthetic patient profiles to ensure robust predictive accuracy under noisy real-world conditions.

Following initial reviewer feedback from the Journal of Medical Systems, I am currently refining the manuscript for resubmission to an Elsevier biomedical engineering journal.

Given ICMR's pioneering leadership in digital health and translational medicine, I would be deeply honored if your office or a designated scientist from your team could review a brief summary of my work.

I have attached a one-page executive summary for your consideration. Thank you for your time and for inspiring young researchers across India.

Respectfully yours,

Anshul R

19/8/26

Please arrange an online meeting of the Scholar with Dr Harpreet Singh Pawar Head, MOMS Unit & inform Head, P&C.

Sr. Taruna to kindly advise.

18/8/26

Taruna
